## **2015 Teacher Resource Booklet**

For over 30 years, high schools in Pennsylvania have been recognizing the value of the Envirothon experience. Students and their teachers become empowered by their own motivation as the Envirothon engages them in an exciting, multi-faceted study of natural resources. Students involved in the Envirothon often pursue further education in natural resource fields. Many Envirothon participants pursuing degrees in various natural resource studies have indicated that their education choice was partly due, or strengthened by, their Envirothon experience. Many Envirothon advisors credit the Envirothon with increasing student interest and involvement in natural resource and environmental sciences. To many people involved, the Envirothon is more than just a competition.

We hope that whether this is your first Envirothon or you are a veteran participant, you and your team are excited to learn about the environment, our relationship with it, and how we can each work towards its protection and conservation.

This year features “Urban and Community Forestry” as the Current Environmental Issue. We have made an effort to link the other stations (Soils/Land Use, Aquatic Ecology, Forestry, and Wildlife) with the Current Issue in the Essential Topics and Learning Objectives.

This Teacher Resource Booklet is intended to help you and your teams become fluent in a broad range of natural resource topics. It outlines the program guidelines of the Envirothon, including the Learning Objectives and Reference Lists. Included are:

1. Envirothon Mission Statement and Objectives
2. Envirothon Sponsors, Partners, and Financial Contributors
3. General Information about the 2015 Pennsylvania and North American Envirothon events
4. Brief History of the Envirothon
5. Overview of Station testing and a past current issue station test used in 2012
6. Overview of state Oral Component and the 2014 scenario
7. Some Tips for Teaching Envirothon Material
8. Aquatic Ecology \*
9. Current Issue \* “Urban and Community Forestry” \*
10. Forestry \*
11. Soil/Land Use \*
12. Wildlife \*

*\* The following are specified for each station:*

*a) Essential Topics*

*b) Learning Objectives*

*- Each is correlated with the PDE Environment & Ecology and Science and Technology Standards*

*c) Reference Materials List - If you are missing any of these materials, contact your County Conservation District.*

*d) Learning Enhancements*

## ***MISSION STATEMENT***

The Pennsylvania Envirothon educates high school students in natural resources and environmental sciences. The program emphasizes the importance of environmental sensitivity while stressing a need to achieve a social, ecological, and economic balance. The learning objectives emphasize awareness, knowledge, and attitudes through outdoor hands-on applications while addressing the complex natural resource concerns facing today's world as well as the challenges of tomorrow.

### ***OBJECTIVES***

**Awareness:** The Envirothon will help students cultivate an awareness of the total environment and acquire sensitivity towards its limited natural resources.

**Knowledge:** The Envirothon will help students develop a basic understanding of the earth's ecological systems and the life-sustaining implication these systems have on all living things.

**Attitudes:** The Envirothon will help students develop attitudes, which embrace environmental sensitivity and instill the dedication to participate in activities geared towards protecting the environment.

**Application:** The Envirothon will help students develop skills needed to identify, investigate, and contribute to the resolution of environmental issues and problems.

## ***PARTNERS and SPONSORS***

### **Partners**

Pennsylvania Association of Conservation Districts  
Pennsylvania State Conservation Commission  
Pennsylvania's sixty-six Conservation Districts  
Pennsylvania Department of Agriculture  
Pennsylvania Department of Conservation and Natural Resources Bureau of Forestry  
Pennsylvania Department of Conservation and Natural Resources Bureau of State Parks  
Pennsylvania Department of Education  
Pennsylvania Department of Environmental Protection  
Pennsylvania Fish and Boat Commission  
Pennsylvania Game Commission  
U.S. Department of Agriculture, Natural Resources Conservation Service

### **Corporate Sponsors**

Shell Oil Company  
PPL Corporation  
Access Midstream  
Air Products Foundation  
Marcellus Shale Coalition  
Pennsylvania Outdoor Writers Association  
Pennsylvania Outdoor Trappers Association  
Philadelphia Insurance Companies  
The Hershey Company  
Dwight Lewis Lumber  
Lewis Lumber Products  
Cargill

## **2015 PENNSYLVANIA ENVIROTHON**

**What:** Pennsylvania State Envirothon – 32<sup>nd</sup> Annual

**Who:** Teams of High School Students from all across Pennsylvania

**When/Where:** Tuesday, May 19, 2015 - University of Pittsburgh Johnstown  
Wednesday, May 20, 2015 – Windber Borough Recreational Park

**Why:** To test the students' knowledge of Pennsylvania's natural resources while providing them with the ability to address the complex environmental concerns facing today's world as well as the challenges of tomorrow.

**How:** Teams rotate through five stations.

### Station

Aquatic Ecology

Wildlife

Soil/Land Use

Forestry

\* Urban/Community Forestry

(\* The fifth testing station is a Current Environmental Issue, which changes annually.)

### Cooperating Agency

PA Fish & Boat Commission

PA Game Commission

USDA Natural Resources Conservation Service

PA DCNR Bureau of Forestry

PA Envirothon, DCNR, Penn State Extension

### Past Current Environmental Issues:

1984 - Acid Rain

1985 - Hazardous Waste

1986 - Solid Waste Management

1987 - Water Quality

1988 - Farmland Preservation

1989 - Recycling

1990 - Wetlands

1991 - Energy Sustainability

1992 - Groundwater

1993 - Pesticides

1994 - Acid Rain

1995 - Groundwater

1996 - Greenways

1997 - Pest Management

1998 - Watersheds

1999 – Wildfire Management

2000 - Wetland Management

2001 - Urban Nonpoint Source Pollution

2002 - Introduced Species

2003 - Farmland Preservation & Conservation

2004 - Natural Resource Management in the  
Urban Environment

2005 – Managing Cultural Landscapes

2006 – Water Stewardship in a Changing Climate

2007 – Alternative/renewable Energy

2008 – Recreational Impacts on Natural Environments

2009 – Biodiversity in a Changing World

2010 – Protection of Groundwater

2011 – Salt and Fresh Water Estuaries

2012 – NPS & Low Impact Development

2013 – Grazing and Pastureland Management

2014 – Sustainable Agriculture/Buy Locally

## **2015 NORTH AMERICAN ENVIROTHON**

The winning team of the Pennsylvania Envirothon will advance to the North American Envirothon being held July 27 – August 2, 2015 at Missouri State University, Springfield, Missouri. Over forty-seven states and nine Canadian provinces/territories are expected to participate in this 27<sup>th</sup> North American event!

## **BRIEF HISTORY OF THE ENVIROTHON**

The Envirothon program began here in Pennsylvania as the “Envir-Olympics” in 1979 with three counties holding competitions. In 1984, the first State competition was held with six counties participating. 1988 marked an important year in our history: the event had grown to include thirty-eight teams; the program was officially changed to “Envirothon”; and Pennsylvania planned, hosted, and won the first National Envirothon. Over 15,000 students now participate each year and the program has grown to include every conservation district in the state.

## OVERVIEW OF THE STATION TESTING

To prepare teams for the Pennsylvania Envirothon, most counties model their testing stations after the state competition.

Traditional state testing evaluates team performance in four universal areas (i.e., soils/land use, aquatic ecology, forestry, wildlife) and a different current environmental issue each year. At each station, written tests assess each team's knowledge of the specific resources at that site.

For example, the forestry station relates to forest ecology, forest structure and composition, regional tree and plant species, and silvicultural and forestry practices; the aquatic ecology station relates to aquatic ecosystems, species diversity, and aquatic resource management; the soils/land use station relates to land formation, use of a soil survey, and land management practices; and the wildlife station relates to wildlife ecology, conservation and management practices, regional wildlife species, and issues involving wildlife and society.

Station testing is designed to provide a challenging, hands-on opportunity for each team to demonstrate and apply its knowledge of environmental science and natural resource management.

As teams rotate through each of the five testing stations, they experience a variety of testing formats. Most tests include some type of identification, including wildlife tracks or mounts, bird calls, skins, fish, macroinvertebrates, trees, soil textures and soil horizons. The majority of the other questions will be in the format of matching and multiple choice, with a few fill-in-the-blank and short answer questions. At each station, teams receive a brief introduction to the specific site. The test is usually administered by a natural resource professional with expertise in that field. Students spend 25-35 minutes at each testing station with a five minute period for questions and review, and a five minute period for travel between stations.

### Sample Station Test

The following are questions taken from the actual test used for the **2012 Current Issue** station. This county level test was based on the theme "Nonpoint Source Pollution and Low Impact Development." These are examples of the types of questions you might experience at any given Envirothon competition.

1. Runoff from urban areas can directly impact the water quality of streams and lakes. Urban runoff most often \_\_\_\_\_ when routed through underground storm sewers.
  - A. Can help to improve water quality
  - B. Discharges directly to groundwater aquifers
  - C. Operate as a continuous sump
  - D. Discharges directly into a lake or stream
2. Storm sewer systems concentrate runoff into straight conduits where the water can gather speed and power as it travels underground. When the runoff leaves the storm drain and empties into a stream, it can do all of the following EXCEPT which of the following?
  - A. Carry higher water temperatures
  - B. Damage streamside vegetation
  - C. Decrease nutrient loads
  - D. Carry high sediment loads

3. Many homeowners tend to burn yard waste, especially along lakeshores and streambanks. What is the main concern regarding this practice in relation to water quality?
  - A. The ashes are high in nutrients and can be easily washed into the water
  - B. The ashes are unsightly
  - C. The ashes can choke the fish and aquatic life
  - D. The ashes are low in nutrients and could encourage increased plant growth
  
4. Which of the following concepts is **not** considered to be a Low Impact Development practice?
  - A. Increase the flow path for stormwater runoff.
  - B. Utilize clustered housing sites
  - C. Utilize smaller, more decentralized treatment practices
  - D. Protect and incorporate natural systems as design elements
  - E. Maximize impervious surfaces
  
5. Engineered grassed swales can be an alternative to curbs, gutters and storm drains (traditional structural conveyances). When comparing the costs of the traditional structural conveyance systems and the grassed swales, which of the following would we find true for the traditional structural conveyance system?
  - A. Approximately the same as an engineered grass swale
  - B. Not yet determined
  - C. Approximately two to three times more expensive than an engineered grass swale
  - D. Approximately 50% less expensive than an engineered grass swale
  - E. Approximately 50% more expensive

**Match the BMP with the description**

- |  |  |
|--|--|
| <ol style="list-style-type: none"> <li>6. Filter Strip</li> <li>7. Vegetated Swale</li> <li>8. Bio-retention</li> <li>9. Detention Ponds</li> <li>10. Rain Barrel</li> </ol> | <ol style="list-style-type: none"> <li>A. Shallow, landscaped depression with a layered design of under-drain, permeable sand/soil and rock or vegetation that filters sediment from runoff.</li> <li>B. Receive and hold runoff for release at a predetermined rate.</li> <li>C. Gently sloping, densely vegetated area acting as a buffer between impervious areas and streams.</li> <li>D. Connected to a downspout in order to collect stormwater for future use.</li> <li>E. U-Shaped channel, planted with grass, shrubs or trees along the base and sides to enhance infiltration of runoff.</li> </ol> |
|--|--|

**Fill in the Blank**

11. An increase in impervious surfaces in an area can have dramatic effects on hydrology and water quality. Using the terms “increased” or “decreased”, an increase in the amount of impervious surface in an area can lead to \_\_\_\_\_ volume, \_\_\_\_\_ peak flow, \_\_\_\_\_ peak flow duration, \_\_\_\_\_ stream temperature and \_\_\_\_\_ base flow of local streams.

## **ORAL COMPONENT**

### **What is the Oral Component?**

The Oral Component (OC) offers Envirothon teams a chance to address real-life environmental problems as presented through a written scenario. The OC tests a team's ability to consider an environmental issue, discuss its likely ramifications and effects, develop possible solutions, and present their findings to a panel of judges and then answer the judges' questions during a 20-minute session. Participation in the OC is mandatory. The OC offers students a chance to hone their public speaking, problem solving, and presentation skills, and it also helps the students prepare for the upcoming testing stations.

### **How does it Work and What will it Teach My Students?**

It is mandatory for ALL teams to participate in the Oral Component.

**The 2015 scenario will be posted on the Pennsylvania Envirothon website ([www.envirothonpa.org](http://www.envirothonpa.org)) on Wednesday, May 13<sup>th</sup>, during the week prior to the event.** Posting the scenario provides teams an opportunity to better prepare for their oral presentation. Teams can utilize existing resources and research new information. Teams may also receive limited guidance (i.e., review score sheet, clarify scenario) from their advisors; advisors are asked to NOT prepare the presentation for their team.

The OC consists of a 5 – 10 minute oral presentation and a 10 minute question/answer period to a panel of five to seven judges chosen by the Pennsylvania Envirothon Board. A total of five to seven judges constitute a panel in each room. Each team is asked questions based on their recommendations and scored accordingly by the panel of judges. On the day of competition prior to their scheduled presentation time, teams are allotted one hour to prepare any visuals they wish to use during their presentation. A schedule is provided closer to the event. The Pennsylvania Envirothon provides teams with all materials, which are permitted for use. No other materials are allowed. This list is included in the Oral Competition Rules and Guidelines. Also within this one hour timeframe, teams may practice their presentation before going in front of the judges.

The presentation usually consists of how the team's proposed idea will positively and/or negatively impact the land, water, air, wildlife, forests, and people of the area. Although a few resource materials might be provided, the majority of the team's proposal is based on the resources they've been studying throughout the year.

When participating in the Oral Component, **teams are asked to NOT wear attire** (hats, shirts, shorts, etc.) **that may indicate or include their county name or school name.** Anonymity is important when the students are presenting before a panel of judges; this helps to keep a level playing field for all teams.

This is a great opportunity for students to work together and apply the things they have learned while studying for the Envirothon competition. Teams discuss their findings prior to presentation time and decide which of their recommendations is feasible in a real life situation. They are asked to defend and explain their recommended actions. Students are not judged on what is "right" or "wrong", they are judged on their ability to think on their feet and incorporate their existing knowledge of Soil/Land Use, Aquatic Ecology, Wildlife, Forestry and the year's current issue. The scenario is based on the Current Issue theme each year when applicable.

### **When is it Held?**

The Oral Component is held the day prior to the station testing. Team presentation times are randomly scheduled. Teams are encouraged to call the Envirothon office if they cannot make their scheduled time.

### **How Can My Team Prepare?**

To help your county team prepare for the Oral Component experience, peruse the "Learning Enhancement activities" provided in the literature in this booklet. Many of the activities allow students to role-play situations that affect various environmental areas. These role-playing extensions could be very valuable in preparing a team to think in terms of how all the traditional station areas interconnect. In addition, your teams can view the top five presentations from the 2013 North American Envirothon competition by visiting the North American Envirothon website's Media Center Video Gallery at:

[http://www.envirothon.org/index.php?option=com\\_ttvideo&task=videolist&cid=76&Itemid=201](http://www.envirothon.org/index.php?option=com_ttvideo&task=videolist&cid=76&Itemid=201).

The following scenario was used for the 2014 oral component. This provides an example of the types of issues you might be asked to address at any given Envirothon competition.

### **2014 Oral Component Scenario**

You are the Sustainable Agriculture club at your high school. At your weekly after-school meetings, your club discusses plans for school projects and host speakers relevant to sustainable agriculture. The club has even become involved in community projects like helping to promote the new farmers market in town. The surrounding community has become very excited about and supportive of local and sustainable agriculture, as evidenced by the weekly sell-out at this new farmer's market. Recently, a community member has agreed to donate the one acre vacant lot located next to the school for a school farm project. The owner has stipulated that sustainable farming methods are to be used in return for the donation of the land. The plot is located next to the school building and is currently covered in grass with a few existing trees.

The judges are your school administrators. Before your donation can be accepted, the Sustainable Agriculture club has to present a plan for use of the land. This plan should include the following:

- What crops to grow (or products to produce)
- Growing techniques and soil development
- Water needs
- Weed and pest management

The Sustainable Agriculture club has some funds from a previous fundraiser that will help pay for any startup costs, but you should explain your plans for economic stability and for the use of any school resources that you plan to utilize in the project. Be sure to demonstrate to the school administrators how your plan will impact the local community, the school, and yourselves. In your 10 minute presentation, you should:

- Present your plan, addressing the aspects listed above, and incorporating your own ideas for a feasible school farming project
- Imagine that this is your school, and your community, and incorporate your locality as needed
- Not feel obligated to incorporate the other learning stations (wildlife, aquatics, etc.) as traditionally required
- BE CREATIVE

## **SOME TIPS FOR TEACHING ENVIROTHON MATERIAL**

- 1. Try a few of the learning enhancements listed with some of this year's reference materials!** We have tried to identify learning enhancements that would assist you in teaching Envirothon material. They can be a lot of fun and can help improve student understanding of key concepts for each station.
- 2. Arrange a visit to a local park or nature center!** Just one day or afternoon "in the field" can do wonders for bringing all of your team's studying to life. Many environmental educators in parks and nature centers can lead hikes based around themes or concepts that *you* want covered with your students. Hands-on investigations, tree identification walks, stream investigations: all of these may be possible at sites near your school.
- 3. Ask your Conservation District about tree and log scales, diameter tapes, clinometers, aquatic specimens for identification, topographic maps, and other available educational resources and programs!** Many Conservation Districts have educational resources that you can borrow to assist with training your Envirothon teams. They also offer a variety of training workshops. Talk to your County Envirothon Coordinator about the possibilities of a school program or other educational activity. This person (or persons) is your contact for a wide array of helpful services. Write or give them a call! A listing of contacts and phone numbers can be found on the Envirothon website.
- 4. Visit the PA Department of Education's website!** The Envirothon learning objectives can assist you in addressing the Environment and Ecology and the Science, Technology, Engineering, and Math standards. If you would like to see how the Envirothon learning objectives correlate to these standards, visit the PA Department of Education's website at [www.pde.state.pa.us](http://www.pde.state.pa.us).
- 5. Utilize the World Wide Web!** The Envirothon WebPages have been recently updated and, in addition to all of the information there, it also has links to all of our sponsors and partnering agencies. For updates, current events, and resources, this is a great way to go!

A few links of interest:

- [www.envirothonpa.org](http://www.envirothonpa.org) - Pennsylvania Envirothon homepage
  - [www.envirothon.org](http://www.envirothon.org) – NCF - Envirothon (formerly North American Envirothon) homepage
  - All of our partners' and sponsors' page links can be found on the Envirothon homepage.
  - [www.eNature.com](http://www.eNature.com) - Bird calls, resources, activities, information, updates, etc.
  - [www.eeweek.org](http://www.eeweek.org) – Resources, case studies, etc.
- 6. Follow environmental issues in your local newspapers!** This is a great way for your students to connect all of the environmental concepts the Envirothon covers with "real life." In every spot in Pennsylvania on every day, something is happening which affects the health of our forest ecosystems and watersheds, the quality of living for local residents, and the use of our resources. There are success stories as well as hard lessons in economics, politics, and sociology. Following a current local event in the classroom is an effective way of engaging students in informed discussions and action.

**7. Check out Keystone WILD! Notes** This is wonderful Pennsylvania-centered conservation-education publication. Each issue reviews special articles that can be used in the classroom as foundations for a lesson. To subscribe, visit: <http://www.dcnr.state.pa.us/wrcp/wildnotes/index.html>.

**8. Check out Bay Journal!** This is a broad-reaching and informative monthly publication put out by the Alliance for the Chesapeake Bay that focuses on issues and updates on our downstream estuary. It would be a great addition to teacher reference materials for use in student research assignments, in-class discussions of current events, or a year-long monitoring of this critical ecosystem's health. Topics covered include: water quality, pollution violations, the Clean Water Act, conservation efforts, oyster and crab population levels, and threats of industrial development projects. This is free!

You may read the Bay Journal online at [www.bayjournal.com](http://www.bayjournal.com) or for further information, contact:

Bay Journal  
PO Box 222  
Jacobus, PA 17402-0222

**9. Last, but certainly not least: have fun!** One key to a meaningful natural resource and environmental education experience is *fun*. Reading up on your local ecosystems, having an energetic discussion about a wildlife issue, investigating a stream for water quality, measuring trees like professional foresters, even getting your hands "dirty" in an exposed soil profile, all of these can be fun and exciting adventures in learning. If it's fun, you will not only get the students excited for more, but what will learn information that will stick with them for years to come. Have a great time with the 2015 Envirothon!

## REFERENCE MATERIAL AVAILABLE ONLINE

[www.envirothonpa.org](http://www.envirothonpa.org)

The Pennsylvania Envirothon references are available on-line. For each station, a majority of the references are available on the Pennsylvania Envirothon website under the tab - Station Training. Please visit the site at <http://www.envirothonpa.org>.

Some publications are not available in electronic format or via the internet. These publications are still available in hard copy by contacting your County's Envirothon Coordinator.

**Reference disks that were previously provided are out of date and may not have the current required references. Please refer to the references available on the web site for ALL required material.**

# 2015 AQUATIC ECOLOGY

## Essential Topics

### I. Aquatic Ecology

#### a. Abiotic

1. Influence of water's chemical properties on aquatic organisms
2. Influence of water's physical properties on aquatic organisms
3. Influence of the surrounding land on a stream
4. Influence of the water cycle on the aquatic ecosystem
5. Identification of watersheds and river systems in Pennsylvania
6. Identification and comparison of stream order within a watershed

#### b. Biotic

1. Identification of aquatic organisms
2. Life cycles of aquatic organisms
3. Adaptations of aquatic organisms
4. Habitat needs of aquatic organisms

#### c. Community

1. Identification of aquatic and wetland environments
2. Functions and values of wetlands
3. Physical, chemical, and biological changes in the stream continuum
4. Functional feeding groups of aquatic organisms and their niche in the stream continuum
5. Energy flow in aquatic food chains

### II. Aquatic Resource Issues

1. Human effects on the aquatic ecosystem
2. Impact of water pollution on aquatic communities
3. Threatened and endangered species and their impact on biodiversity
4. Introduced and invasive species and their effects on the aquatic ecosystem

### III. Aquatic Resource Management and Protection

- a. Commission roles in management, conservation, and protection of aquatic resources
- b. Regulations and how they protect aquatic animals and aquatic habitats
- c. Water quality assessment
- d. Water quality improvement
- e. Aquatic habitat enhancement
- f. Restoration of aquatic organisms
- g. Aquatic resource protection at home and school

## Learning Objectives

*\*Correlated with the Academic Standards and Assessment Anchors for Environment and Ecology*

After completing study on this issue, students will:

### 1. Aquatic Ecosystems

#### a. Abiotic

1. Determine pH, alkalinity, and dissolved oxygen percent saturation of a water sample with given information and explain how each property influences a particular aquatic organism.

*\*4.1 Ecology – 4.1.12.F*

*\*4.2 Watersheds and Wetlands – 4.2.10.A, B, C, D, 4.2.12.B, C, D*

2. Explain how water flow, water temperature, water turbidity, and surface tension influence a particular aquatic organism.

*\*4.2 Watersheds and Wetlands - 4.2.10.A, B, C, 4.2.12.C, D*

3. Explain how surrounding land influences water flow, channel shape, and habitat types in a stream.

*\*4.2 Watersheds and Wetlands - 4.2.10.A, B, 4.2.12.A*

4. Identify three specific parts of the water cycle and describe their influence on the aquatic ecosystem.

*\*4.2 Watersheds and Wetlands - 4.2.10.A, B*

5. Identify Pennsylvania's six watersheds and their related river systems and locate them on a map.

*\*4.2 Watersheds and Wetlands - 4.2.10.A*

6. Identify the stream order of three or more given watercourses in a particular watershed and compare or contrast the habitats and aquatic animals that are found in each of those ordered watercourses.

*\*4.2 Watersheds and Wetlands - 4.2.10.A, C*

#### b. Biotic

1. Identify (to include calls) common and significant aquatic animals from a give identification list.

*\*4.2 Watersheds and Wetlands - 4.2.10.C*

2. Describe the life cycle of three or more specific aquatic animals.

*\*4.2 Watersheds and Wetlands – 4.2.10.C*

3. List three adaptations of a specific aquatic animal and explain the advantage of each.

*\*4.1 Ecology – 4.1.10.D*

*\*4.2 Watersheds and Wetlands - 4.2.10.A, C*

4. Describe the habitat needs of three or more specific aquatic animals.

*\*4.2 Watersheds and Wetlands - 4.2.10.C*

c. Community

1. Identify six specific aquatic or wetland environments given their physical, chemical and biological characteristics.

*\*4.2 Watersheds and Wetlands – 4.2.10.B, D*

2. List three functions or values of wetlands.

*\*4.2 Watersheds and Wetlands - 4.2.7.B*

3. Compare and contrast physical, chemical, and biological differences found in a stream continuum from headwater to mouth.

*\*4.2 Watersheds and Wetlands - 4.2.10.A, C, D, 4.2.12.D*

4. Identify the functional feeding group of four or more aquatic macroinvertebrates and describe their niche in the stream continuum.

*\*4.2 Watersheds and Wetlands - 4.2.10.C*

5. Compare and contrast the flow of energy in two different aquatic food chains.

*\*4.1 Ecology - 4.1.7.A, 4.1.10.A*

2. Aquatic Resource Issues

- a. Explain the effects of three different human activities on the aquatic ecosystem.

*\*4.2 Watersheds and Wetlands - 4.2.10.A, B, D, 4.2.12.A, C*

*\*4.5 Humans and the Environment- 4.3.7.B, 4.3.10.B*

- b. List three types of water pollution, their sources and explain how they impact an aquatic community.

*\*4.2 Watersheds and Wetlands - 4.2.10.A*

*\*4.5 Humans and the Environment- 4.5.10.A, C*

- c. Identify at least six threatened or endangered species, give reasons for their status, and explain how their extirpation or extinction could impact biodiversity.

*\*4.1 Ecology – 4.1.10.A, D, E, 4.1.12.D, E, F*

- d. Identify at least six different invasive species and discuss their habitat, spread, distribution and environmental impacts.

*\*4.2 Watersheds and Wetlands – 4.2.10.C*

3. Aquatic Resource Management and Protection

- a. Explain three or more ways that the Commission manages, conserves, and protects aquatic resources.

*\*4.2 Watersheds and Wetlands – 4.2.12.A, B, C*

*\*4.5 Humans and the Environment - 4.5.12.C*

- b. Identify or list at least three specific fishing regulations from the current PA Fishing Summary and explain how each protects aquatic animals or aquatic habitats.

*\*4.1 Ecology – 4.1.12.A, E*

- c. Explain one or more methods to assess the water quality of a stream.  
*\*4.2 Watersheds and Wetlands – 4.2.10.A, C, D*
- d. List and describe three or more ways to improve the water quality of a stream.  
*\*4.2 Watersheds and Wetlands – 4.2.10.C*
- e. List and describe three or more ways to enhance aquatic habitats.  
*\*4.2 Watersheds and Wetlands – 4.2.10.D, 4.2.12.D*
- f. Identify three or more migratory fish that the Commission is restoring and name the watershed in which each can be found.  
*\*4.1 Ecology – 4.1.12.E*
- g. Discuss at least three ways that you can protect aquatic resources at home or school.  
*\*4.1 Ecology – 4.1.10.D, E, 4.1.12.D, E*  
*\*4.5 Humans and Environment*

## Reference Materials List - 2015

The references are found on the PA Envirothon web site at [www.envirothonpa.org](http://www.envirothonpa.org) under *Station Training*. The references are also available on the Commission's Learning Center page: [www.fish.state.pa.us](http://www.fish.state.pa.us).

### 1. *Books:*

Pennsylvania Fishes (ISBN 1-930369-01-8)

Pennsylvania Amphibians and Reptiles (ISBN 1-930369-00X)

Hard copy only, new teams should contact PA Envirothon to obtain a copy.

### 2. *Fact Sheets*

A River Flows Through It

Basics of Water Pollution

Caddis Flies

Clams and Mussels

Crazy Crayfish

Dobsonfly

Dragons & Damsels

ENA & ELPA

Great Fishing Needs Great Habitat

Macroinvertebrate Feeding Frenzy

5. *2015 Pennsylvania Fishing Summary* (available on Commission’s website after December 2014)
  - Catch & Release Bass Regulations – Juniata and Susquehanna River
  - Commonwealth Inland Waters
  - Big Bass Program
  - Delaware River & Estuary
  - Lake Erie (including Transportation of VHS)
  - Trout Fishing Regulations & Special Regulation Areas
  - Panfish Enhancement Special Regulations
  - Reptiles, Amphibians - Seasons and Limits (including Endangered & Threatened native species)
  - Unlawful Acts – It is Unlawful
  - Commonwealth of PA Public Health Advisory/2015 Fish Consumption
  - Stop Aquatic Hitchhikers (both pages)
  
6. *Frog and Toad Calls of Pennsylvania* CD
  - New teams should contact their County Envirothon Coordinator to obtain a copy.
  
7. *Herp Sweet Home* (PA Amphibians & Reptiles Curriculum)
  
8. *Threatened & Endangered Species*
  - Current List of PA’s Endangered, Threatened and Candidate Species
  - Endangered Species and the PFBC
  - Poster of PA’s Threatened & Endangered Species (both sides) \*

<b>Invertebrates</b>	<b>Fish</b>	<b>Amphibians &amp; Reptiles</b>
Clubshell Mussel	Atlantic Sturgeon	Eastern Spadefoot Toad
Dwarf Wedgemussel	Bigmouth Buffalo	Northern Cricket Frog
Eastern Pearlshell Mussel	Burbot	Green Salamander
Northern Riffleshell Mussel	Cisco	Bog Turtle
	Hickory shad	Eastern Mud Turtle
	Longear Sunfish	Redbellied/Eastern Redbelly Turtle
	Spotted Gar	Eastern Massasauga Rattlesnake

\*Participants are responsible for identification of each of the given animals in addition to knowing the information under *Objective 2c*.

9. PA's Field Guide to AIS (PA Sea Grant)

Introduction

Prevention

Species Pages\*

Plants	Invertebrates	Fish	Pathogens	Algae	Amphibians & Reptiles
Curly Leaf Pondweed	Asian Clam	Bighead Carp	Viral Hemorrhagic Septicemia (VHS)	Didymo	Red-eared Slider
Eurasian watermilfoil	New Zealand Mudsnail	Flathead Catfish		Golden Algae	Yellow-bellied Slider
Hydrilla	Rusty Crayfish	Northern Snakehead			
Water Chestnut	Spiny water Flea	Round Goby			
Common Reed	Quagga Mussel	Sea Lamprey			
Purple Loosestrife	Zebra Mussel	Silver Carp			

\*Participants are responsible for identification of each of the given plants and animals in addition to knowing the information under *Objective 2d*.

**Identification Study List** (from PA Fishes and PA Amphibians & Reptiles books)

Fish	Amphibians	Reptiles	Invertebrates
American Eel	Eastern Gray Treefrog*	Common Snapping Turtle	Amphipod/scud
American Shad	Fowler's Toad*	Eastern Box Turtle	Backswimmer
Bluegill	Northern Green Frog*	Midland Painted Turtle	Caddisfly*
Bowfin	Northern Leopard Frog*	Spiny Shoftshell Turtle	Crayfish
Brown Bullhead	Pickerel Frog*	Spotted Turtle	Cranefly/Tipulid*
Brook Trout	Wood Frog*	Wood turtle	Damselfly*
Channel Catfish	Eastern Hellbender	Northern Coal Skink	Dobsonfly/fishfly*
Creek Chub	Four-toed Salamander	Northern Fence Lizard	Dragonfly*
Largemouth Bass	Jefferson Salamander	Eastern (Black) Rat Snake	Freshwater snail
Longnose Dace	Longtail Salamander	Eastern Hognose Snake	Giant Water Bug
Muskellunge	Marbled Salamander	Eastern Milk Snake	Mayfly*
Paddlefish	Mudpuppy	Queen Snake	Predaceous Diving Beetle
Rainbow Trout	Northern Dusky Salamander	Northern Copperhead	Stonefly*
Rock Bass	Northern Spring Salamander	Northern Ringneck Snake	Water Scorpion
Slimy Sculpin	Northern Red Salamander	Northern Water Snake	Water Strider
Smallmouth Bass	Red-Spotted Newt/Red Eft	Ribbon Snake	Whirligig Beetle
Striped Bass	Slimy Salamander	Rough Green Snake	Water Boatman
White Sucker	Spotted Salamander	Timber Rattlesnake	Water Penny
	*Must know calls		*Must know life stages

## **CURRENT ISSUE**

### **Urban and Community Forestry**

It is mostly a matter of population size that determines whether you use the term urban forestry or community forestry where you live. Small, rural-oriented municipalities may not relate well to the word “urban”, so community forestry is the preferred term. In large towns and cities, urban forestry is entirely appropriate. To cover all bases in a single expression, the joint term “urban and community forestry” is widely used. Urban and Community Forestry can be defined as the planting and care of amenity, or landscape, trees, collectively, in human settlements. Urban and community forests broadly include urban parks, street trees, landscaped boulevards, public gardens, river and coastal promenades, greenways, river corridors, wetlands, nature preserves, natural areas, shelter belts of trees, and working trees at industrial brownfield sites.

#### **Benefits of Urban Forests:**

Urban forests are dynamic ecosystems that provide needed environmental services by cleaning air and water helping to control stormwater, and conserving energy. They add form, structure, beauty and breathing room to urban design, reduce noise, separate incompatible uses, provide places to recreate, strengthen social cohesion, leverage community revitalization, and add economic value to our communities.

The value of trees in our community is often overlooked but trees make human habitats more liveable. As we busily go about our days, we don’t always stop to think about how trees soften the many harsh aspects of our built environment. Here is a list of some of the benefits that our community forest provides:

#### **Economic Benefits**

- Trees are great for saving on energy costs. They provide shade in the heat of summer which means less need for air conditioning. If they are deciduous (meaning they lose their leaves in winter), trees allow for sun exposure during the winter season.
- Trees add to assessed property values, especially mature trees and fruit trees.
- Trees are a good investment because they return more benefits than the cost.

#### **Environmental Benefits**

- Trees sustain the long-term environmental health of the community.
- Trees help moderate the effects of harsh climate. They help filter the intensity of the sun and they regulate temperature, wind, and snow and rain.
- Forested areas have less water runoff and erosion.
- Trees provide a natural filter to stormwater and reduce flooding.
- Groundwater recharge is enhanced in forested areas.
- Trees improve air quality by absorbing carbon and producing oxygen. Trees also filter pollutants from the air.
- Trees provide habitat for birds and other wildlife.

#### **Community Benefits**

- Urban trees make walking places safer as they safeguard pedestrians from traffic.
- Trees provide screening and privacy.
- Trees reduce glare and reflection.
- Trees buffer sound, reducing noise pollution.

## **Aesthetic Benefits**

- Trees add to the beauty and peace of our surroundings.
- Trees contribute positively to our quality of life.
- Trees can serve as a source of community pride.

## **Health Benefits**

- Studies have shown that forested areas like parks can reduce blood pressure and benefit the overall emotional and psychological health of individuals.
- Trees help create recreational areas that can be enjoyed by walkers, runners, cyclists, and more.

## **Key Topics**

1. Understand what sustainable urban & community forestry is and why it is important.
2. Understand of the numerous benefits of urban/community forests to society, often referred to as ecosystem services.
3. Understand the costs associated with urban/community forests.
4. Understand what an urban forest management plan is and why it is an essential tool.

## **Learning Objectives**

1. Describe the economic, social, and environmental benefits of urban/community trees to local communities.
2. Comprehension of the effects of urban/community trees on air quality and water quality.
3. Knowledge of research showing that trees contribute to our health, well-being and quality of life.
4. Understanding of threats to urban/community forests such as invasive species, insect and diseases, climate change, fire, air pollution, lack of management capability and development pressures.
5. Understand what a tree inventory is and what it is used for.
6. Understand the components of an urban/community forest management plan.
7. Basic knowledge of models and tools used to calculate the value of tree canopy functions.

## Resource/Study Materials

1. Urban Forestry Manual – 10 Units available from Urban Forestry South - Centers for Urban and Interface Forestry (**Teams are not required to study the following in each section: Before You Begin; Case Study; Next?; For More Information; and Checking Your Answers.**)
2. Urban and Community Tree Inventories - North Carolina Forest Service
3. Stormwater to Street Trees – Engineering Urban Forests for Storm water Management from EPA (**Teams are not required to study the Case Studies found on pages 25 – 31.**)
4. Urban Forestry Best Management Practices for Public Works Managers from the American Public Works Association
5. Community Tree Plans: A Guide for Tree Commissions and Environmental Advisory Councils.
6. The Pennsylvania Tree Resource Guide – [Community Forests](#)

## Learning Enhancement

1. **i-Tree** - i-Tree is a state-of-the-art, peer-reviewed software suite from the USDA Forest Service that provides urban forestry analysis and benefits assessment tools.

# FORESTRY

## Learning Objectives 2015

The basic resources for each objective are found on the PA Envirothon web site at [www.envirothonpa.org](http://www.envirothonpa.org) under *Station Training*.

*\*Correlations with the Academic Standards for Environment and Ecology and Science and Technology are provided.*

### 1. Trees

- a. Identify common species without a key and specific or unusual species of trees or shrubs using a botanical key. (Use of a botanical key is an important skill in many environmental professions. Practice with the Key to Some Common Trees of Pennsylvania provided.)  
Pay special attention to shade tolerance and soil moisture requirements of each tree species studied. Understand their timber and wildlife values.

*\*4.3 Natural Resources – 4.3.10.A*

- b. Explain typical tree growth and life cycle. Be able to describe the parts and tissues of a tree and their arrangements and functions. Recognize defects that effect a tree's health, quality and resource potential.

*\*4.3 Natural Resources*

*\*3.1 Biological Sciences – 3.1.10.A3*

- c. Explain the cause and effect relationships between environmental factors (light, soil and moisture), and tree growth. Be able to interpret these effects in the growth rings of a sample of wood (either a "tree cookie" or core taken with an increment borer).

*\*4.3 Natural Resources*

*\*3.1 Biological Sciences – 3.1.10.A3*

### 2. Forest Ecology.

- a. Explain general forest typing based on the dominant tree species. Describe major forests types found in Pennsylvania. Analyze and type a specific forest site.

*\*4.3 Natural Resources – 4.3.10.A, C*

- b. Explain typical forest structure (canopy, under story and ground layers) and crown classes.

- c. Explain typical forest succession from open areas to closed canopy and back again. Analyze the successional stage of a specific forest site.

*\*4.1 Ecology – 4.1.10.E*

*\*4.3 Natural Resources – 4.3.10.C*

- d. Explain how wildlife habitat relates to the forest plant community (i.e. tree species present, age structure, snags and dead-and-down trees, availability of food and riparian zones).

*\*4.1 Ecology – 4.1.10.C, D*

- e. Explain what effects a specific species increase or decrease might have on the forest ecosystem.

*\*4.1 Ecology – 4.1.10.E, 4.1.12.E*

*\*3.1 Biological Sciences – 3.1.10.A3*

- f. Evaluate species diversity and its importance. Explain biological diversity as an indicator of a healthy environment as well as analyze the effects of species extinction on the health of an ecosystem.

*\*4.1 Ecology – 4.1.10.A, 4.1.12.A*

### 3. Forest Resource Management and Protection.

- a. Study *Pennsylvania Forests 2009*. This is a summary of the most current data available describing Pennsylvania's forest resources. Particularly note the patterns of forestland ownership, area of forests, distribution of age and size classes and of tree species, wood volume statistics and regeneration issues. Describe the distribution of forest land ownership in Pennsylvania as cited in the "Forest Features" section of this report.
- b. Describe values and benefits of forests for recreation, wildlife and watershed quality.  
\*4.1 Ecology – 4.1.10.A
- c. Explain the uses of silviculture techniques in even-aged and uneven-aged forest management: thinning, clear-cutting, seed-tree method, shelter wood method, and selection method. Describe the practices of "high grading" and "diameter limit" cutting.  
\*4.3 Natural Resources – 4.3.10.A, C, 4.3.12.C
- d. Summarize State and local regulations and programs pertaining to timber management including PA Code Chapter 102 Erosion & Sedimentation Control regulations, waterways management regulations—PA Code Chapter 105.  
\*4.2 Watersheds and Wetlands – 4.1.12.A  
\*4.3 Natural Resources – 4.3.10.B
- e. List products and uses of the 10 important hardwoods grown in Pennsylvania cited in *From the Woods Series: Ten Important Hardwoods* resource and of the important conifers — White pine and Eastern hemlock — described in *The Common Trees of Pennsylvania*.  
\*4.3 Natural Resources – 4.3.10.A
- f. Explain the value of forestlands as community water sources. Describe the potential for pollution from timber harvesting and the practices used to minimize erosion and sedimentation.  
\*4.2 Watersheds and Wetlands – 4.2.10.A  
\*4.3 Natural Resources – 4.3.10.A  
\*4.5 Humans and the Environment – 4.5.10.C, 4.5.12.C
- g. Demonstrate the use of common forestry equipment (Biltmore stick, diameter tape and clinometers), to measure tree diameter and height. Be able to calculate wood volume.
- h. Identify and describe the life cycle and impacts of common forest pests and invasive plants. Research integrated pest management strategies for selected pests.  
\*4.5 Humans and the Environment – 4.5.10.B, 4.5.12.B
- i. Predict how human or natural action can produce change to which an organism cannot adapt (Gypsy Moth, Chestnut blight, invasive species, etc.)  
\*4.1 Ecology – 4.1.10.A, 4.1.12.A
- j. Explain the role of fire in forest ecosystems. Describe the basic principles of wildfire prevention and control. Explain the use of prescribed fire.  
\*4.1 Ecology – 4.1.10.E

### 4. Community Forestry.

- a. Describe the benefits of maintaining trees in urban and suburban communities and factors affecting their health and survival.  
\*4.1 Ecology – 4.1.10.A

## Reference Materials List - 2015

Most of these references materials are excerpted from publications produced by the Pennsylvania State University or the USDA Forest Service. Many topics are covered more than once in different ways. So the volume of material is not as overwhelming as it might appear at first glance.

The references are found on the PA Envirothon web site at [www.envirothonpa.org](http://www.envirothonpa.org) under *Station Training*.

### Review updated information with these on-line resources.

Information on Pennsylvania native wild plants, invasive exotic plant problems and ginseng can be found at <http://www.dcnr.state.pa.us/forestry/plants/index.htm>.

Check recent developments in the fight against invasive plant species on the internet at [www.invasivespeciesinfo.gov/](http://www.invasivespeciesinfo.gov/) under "Species Profiles".

Get updated information about Asian longhorned beetle, emerald ash borer, gypsy moth and other insect pests on the DCNR-Bureau of Forestry-Forest Pest Management website <http://www.dcnr.state.pa.us/forestry/insectsdisease/index.htm> and the US Forest Service web site at <http://www.emeraldashborer.info/>

The Penn State College of Agricultural Sciences – School of Forest Resources provides a Sustainable Forestry Teacher Resource Center which includes lesson plans on sustainable forestry, natural resources, water, and wildlife. The lesson plans are designed by teachers for actual use in the classroom and meet Pennsylvania's environmental and ecology education standards. Each lesson plan indicates subject matter, grade level, and regional applicability. The lesson plans can be adapted to fit your location. These resources are found at <http://sftrc.cas.psu.edu/>.

**Additional sources:** The following books contain helpful information, illustrations and background materials. They are available in libraries and bookstores.

Peterson Field Guide Series, Published by Houghton Mifflin Company

A Field Guide to Eastern Forests, by John C. Kricher and Gordon Morrison. Good coverage of several complex topics. The most pertinent sections are:

Chapter 2. *Forest Field Marks for "Stratification"; "Predicting a Forest's Future"; "The Forest Food Chain and Ecological Pyramid"*

Chapter 4. *Disturbance and Pioneer Plants covers "Ecological Succession: The Process of Vegetation Development Over Time"*

Chapter 8. *Autumn and Winter* has a few paragraphs on *"Tree Trunks and Growth Rings"*

For help with tree identification try these titles also from the Peterson Field Guides series:

A Field Guide to Trees and Shrubs by George A. Petrides

A Field Guide to Eastern Trees by George A. Petrides/Janet Wehr

**Bureau of Forestry Service Foresters** can help teacher/advisors prepare for local Envirothon events. See the Bureau's web site for the service forester assigned to your county at: <http://www.dcnr.state.pa.us/forestry/yourwoods/serviceforesters/index.htm>.

### Learning Enhancements:

2. **i-Tree** - i-Tree is a state-of-the-art, peer-reviewed software suite from the USDA Forest Service that provides urban forestry analysis and benefits assessment tools.
3. **leafsnap** - Leafsnap is a series of electronic field guides being developed by researchers from Columbia University, the University of Maryland, and the Smithsonian Institution. The free mobile apps use visual recognition software to help identify tree species from photographs of their leaves.

# SOIL/LAND USE

## Essential Topics

New topics/objectives are underlined>.

### I. Basic Soils Knowledge

- a. Formation
- b. Water in soils
- c. Soil horizons
- d. Hands-on investigations
- e. Soil quality, fertility, and chemistry
- f. Soil biology and diversity

### II. Understanding Maps, Surveys and Landforms

- a. Soil survey maps and data tables: **Websoilsurvey**
- b. Topographic maps
- c. Land forms and geologic terms

### III. Land Use

- a. Agriculture and conservation practices
- b. Current environmental concerns and land use issues
- c. Soils and history
- d. Pollution remediation
- e. Identification and benefits of wetlands
- f. Carbon sequestration

### IV. Decision-Making and Protection of Soils

- a. Scenarios
- b. Actions at home and at school

## Learning Objectives

*\*Correlated with the Academic Standards and Assessment Anchors for Environment and Ecology*

After completing study on this issue, students will:

1. Describe the relationship between soil formation and the movement of water both within the soil and across the landscape.  
*\*4.4 Agriculture and Society – 4.4.10.C*
2. Describe how soil characteristics are affected by water, and how to control water movement to prevent erosion and pollution. Understand how topography, stream movement, and drainage are related.  
*\*4.2 Watersheds and Wetlands – 4.2.10.A*
3. Explain the importance of wetlands and how to recognize potential wetland areas and hydric soils.  
*\*4.2 Watersheds and Wetlands – 4.2.10.B, D 4.2.12.D*

4. Explain the importance of soils as a natural resource which must be managed properly in order to sustain a healthy society. Understand that soils are in some ways nonrenewable, and what effects gross mismanagement of soils has had historically.  
*\*4.3 Natural Resources – 4.3.10.A, B, 4.3.12.B*
5. Describe the effects of human activity on soils and how soils can be used to clean up pollutants or can become a major pollutant.  
*\*4.5 Humans and the Environment – 4.5.10.A, C, 4.5.12.C*
6. Describe basic soil chemical and physical properties and how they interact with other variables to determine soil fertility or the ability of a soil to remediate pollution and improve environmental health.  
*\*4.5 Humans and the Environment – 4.5.10.E*
7. Explain how soil is alive, and how biological diversity is important for soil health and hence human, plant, and environmental health.  
*\*4.1 Ecology – 4.1.10.B, D, E*
8. Explain the soil food web and the different roles and survival strategies that various soil microbial organisms develop within the soil environment.  
*\*4.1 Ecology – 4.1.10.C, D, 4.1.12.C*
9. Understand and be able to describe the importance of soils to agriculture and soil quality properties. Describe current research findings on best management practices to maximize agricultural production, maintain and build soil health, and prevent soil loss and pollution.  
*\*4.4 Agriculture and Society – 4.4.10.A, B, C, D*
10. Use the soil survey to evaluate the best crops to grow in a given area and what limitations certain soils have to agricultural productivity. Also identify areas of prime farmland that should be preserved.  
*\*4.4 Agriculture and Society – 4.4.10.C, D*  
*\*3.4 Technology and Engineering Education – 3.4.12.E2*
11. Describe the hydrologic, carbon, and nutrient cycles and how soil management relates to those processes.  
*\*4.1 Ecology – 4.1.10.B*  
*\*3.3 Earth and Space Education – 3.3.10.A2*
12. Explain how societal needs, economic forces, and natural forces affect soil resources and how we can ensure long term sustainability of soil health.  
*\*4.4 Agriculture and Society – 4.4.10.B, C, D*  
*\*4.5 Humans and the Environment – 4.5.10.A*
13. Explain historical events that led to the creation of the soil conservation service.
14. Explain in detail the role that geology plays in soil formation, the kinds of soils that are formed, and their basic characteristics including texture, pH, color, and structure.  
*\*4.1 Ecology – 4.1.10.F, 4.1.12.D*

15. Describe the basic geological features and rocks of the state of Pennsylvania and how they were formed.

*\*4.1 Ecology – 4.1.10.F*

*\*3.3 Earth and Space Education – 3.3.10.A1*

16. Understand and interpret geographical and geological information from topographic maps. Be able to make some basic assumptions about appropriate land use from topographic and geologic maps and information.

*\*4.1 Ecology – 4.1.10.F, 4.1.12.F*

*\*3.4 Technology and Engineering Education – 3.4.10 and 12.E2*

17. Use a soil survey or web-soil survey data to evaluate land use in Pennsylvania. Show how information in soil surveys can help the land user predict or avoid problems like sinkholes, or regions prone to landslides, flooding, drought, or soil instability.

*\*4.1 Ecology – 4.1.10.F, 4.1.12.F*

*\*3.4 Technology and Engineering Education – 3.4.10 and 12.B2, 3.4.10 and 12.E2*

18. Compare different kinds of land uses and conservation practices on erosion and sedimentation.

*\*4.4 Agriculture and Society – 4.4.10.E*

19. Explain how climate is a major soil forming factor through its effect on vegetation, organisms, water, and weathering.

*\*4.3 Natural Resources – 4.3.10.C, 4.3.12.C*

20. Explain how soils and soil management are integral to maintaining clean water and a healthy aquatic environment.

*\*4.2 Watersheds and Wetlands – 4.2.12.A*

*\*4.5 Humans and the Environment – 4.5.10.C*

# WILDLIFE STATION

## Essential Topics

- I. Knowledge of Birds and Mammals
  - a. Bird and mammal identification
  - b. Natural history of birds and mammals
  - c. Habitat/ecosystem types and associated wildlife
  
- II. Understanding Wildlife Ecology
  - a. Survival requirements of wildlife and how they are met
  - b. Ecosystem dynamics:
    - Predator-prey relationships
    - Energy flow-food chain, food web, food pyramid
    - Succession
  - c. Adaptations
  - d. Population Dynamics
  
- III. Conservation and Management of Wildlife
  - a. Pennsylvania Game Commission
  - b. Hunting and Trapping regulations
  - d. Pennsylvania Game and Wildlife code
  - e. Wildlife Management
  - f. Improving/managing habitat for wildlife
  
- IV. Issues Involving Wildlife and Society
  - a. Biodiversity
    - Levels of biodiversity
    - Importance of biodiversity ecologically and in our everyday life
    - Loss of biodiversity: causes and implications
  - b. Endangered and threatened species
    - What makes a species more prone to becoming endangered than other species?
    - Responsibility for upholding endangered species act
    - Terminology, for example: reintroduction, endangered, threatened, extirpated, and extinct
    - Endangered and threatened birds and mammals of PA
  - c. Habitat loss and fragmentation
  - d. Managing/planning for people and wildlife
  - e. Non-native species; invasive species; introduced species
  - f. Reintroduction of native species

## Learning Objectives

*\*Correlated with the Academic Standards and Assessment Anchors for Environment and Ecology*

Envirothon Students will be able to:

### 1. Knowledge of Wild Birds and Mammals

- a. Answer questions concerning the natural history of wild bird and mammal species and identify birds and mammals if given natural history information.
- b. Identify and be able to group animals that would be associated with specific ecosystems
- c. Evaluate a specific habitat and select or list species most likely to live there.
- d. Describe various roles of birds and mammals in their ecosystems and be able to cite examples.
- e. Identify wildlife species from mounted specimens, pictures or silhouettes.  
(Species for items **a - e** are selected from the Wildlife Notes found on List A and B in the Appendix.)
- f. Identify birdcalls of bird species found on List C in the Appendix.
- g. Identify wildlife species based on signs including: fur, hair, wings, feathers, gnawing, rubbings, pellets, tracks◇, skulls\* and scat. (tracks for ◇animals only and skulls for \*animals ) - Wildlife species are selected from List D in the Appendix.
- h. Describe ways habitat can be managed/improved for specific birds and mammals.
- i. Define and explain terms that are used to describe wild birds and mammals and their physical traits, physiology, behaviors, social behaviors, such as walking plantigrade or laying eggs in another nest (nest parasitism); delayed implantation, etc.
- j. Identify and describe examples of wildlife species and their adaptations that enable them to survive in an urban environment and possible issues for people. (for example raccoon, opossum, skunk, red fox, robin, house finch, house sparrow, little and big brown bats, white-tailed deer)

*\*4.1. Ecology – 4.1.7.10.A, D*

### 2. Understanding Wildlife Ecology

- a. Identify basic needs required by wildlife.
- b. Identify, describe, and explain specific anatomical, physiological and/or behavioral adaptations of wildlife to the environment and how they help the animal survive. (i.e. migration, hibernation, defense posturing, strong beak, webbed feet, - includes skull and teeth and all descriptions, explanations, and terminology in reference to skull hand-out)
- c. Describe predator-prey relationships, discuss physical adaptations of predator vs. prey species, and be able to cite examples.
- d. Describe and be able to model food chains, food webs, trophic levels - be able to cite examples.  
*\*4.1 Ecology – 4.1.10.C*
- e. Describe factors that limit or enhance population growth.  
*\*4.1 Ecology – 4.1.10.A*
- f. Define and explain terms associated with wildlife biology and wildlife populations. (For example: natality, mortality, precocial, altricial, crepuscular, nocturnal, delayed implantation, carnivore, niche, herbivore, insectivore, omnivore, producer, primary consumer, secondary consumer, etc.).
- g. Define and explain basic ecological concepts and terminology (for example: limiting factor, biological carrying capacity, cultural carrying capacity, territory, home range, population, community, succession, forest fragmentation, etc.).

*\*4.1 Ecology – 4.1.10.A*

### 3. Conservation and Management of Wildlife

- a. Describe the role of the Game Commission as the agency responsible for the protection, conservation, and management of wild birds and mammals of Pennsylvania.  
*\*4.1 Ecology – 4.1.12.A*
- b. Identify the Game Commission as the agency responsible for hunting and trapping regulations and upholding the Game and Wildlife code in the state of Pennsylvania.
- c. Answer questions concerning hunting and trapping regulations - related to pages indicated in the Reference section of the Appendix.
- d. Classify birds and mammals as to Game and Wildlife Code classifications.
- e. Identify and describe methods that can be used to evaluate a habitat.
- f. Identify and describe methods that can be used to determine the abundance and distribution of wildlife.
- g. Identify and describe methods that can be used to determine the specific needs of a species.
- h. Describe methods used to manage and conserve wildlife and wildlife habitat, including the roles of Wildlife Management Units.  
*\*4.1 Ecology – 4.1.12.A*
- i. Describe current deer management practices, and the major goals of deer management in our state .
- j. Describe ways each person can help in the protection, conservation management and enhancement of wild bird and mammal populations.  
*\*4.1 Ecology – 4.1.12.A*

### 4. Issues Involving Wildlife and Society

- a. Define biodiversity and provide examples of how biodiversity is important to people and wildlife.  
*\*4.1 Ecology – 4.1.12.A*
- b. Describe levels of biodiversity (genetic, species, and ecosystem or community) and explain why diversity within each level is important for healthy environment.  
*\*4.1 Ecology – 4.1.10.D*
- c. Describe implications of biodiversity loss at each of the 3 levels of biodiversity.  
*\*4.1 Ecology – 4.1.10.D*
- d. Identify and explain the major causes of loss of biodiversity in our state and worldwide.  
*\*4.1 Ecology – 4.1.10.D*
- e. Explain the relationship of deer and deer management with biodiversity in our state.  
*\*4.1 Ecology – 4.1.10.D, 4.1.12.D*
- f. Identify and explain the terms used in endangered and threatened species, for example: extinct, extirpated, endangered, threatened, candidate species, and reintroduction.
- g. Identify wild birds and mammals that are listed as extinct, endangered, extirpated, threatened or candidate species. Know natural history and habitat requirements. Describe the main causes that have led to the depleted populations and describe measures being taken to help their recovery.  
*\*4.1 Ecology – 4.1.12.D*
- h. Identify and explain factors that have led to species becoming extinct, endangered and threatened.  
*\*4.1 Ecology – 4.1.12.D*

- i. Identify and explain factors which can make a species more likely to become endangered and threatened.  
\*4.1 Ecology – 4.1.12.D
- j. Identify and explain methods and management practices that are used to save an endangered or threatened species.  
\*4.1 Ecology – 4.1.12.D
- k. Describe major causes of habitat loss in Pennsylvania and how habitat loss affects wildlife.
- l. Explain the role of the Endangered Species Act in helping to conserve endangered and threatened species.  
\*4.1 Ecology – 4.1.12.D
- m. Know the organizations and agencies responsible for listing species on global, federal and state level.
- n. Describe specific impacts of people on biodiversity – both negative and positive, for example:
  - Negative impacts include but are not limited to:
    - Fragmentation of habitat due to roads and trails, buildings, etc.
    - Disturbance of wildlife in nesting seasons due to human activity and noise.
    - Destruction of habitat due to vehicle.
    - Death and/or injury of species by vehicle collision.
    - Trash interfering with wildlife health through food intake or causing injury to wildlife.
    - Pesticides or other changes to environment to make areas more comfortable.
  - Positive impacts include but are not limited to:
    - Enhancement of wildlife habitat in order to attract wildlife for viewing.
    - Increase knowledge of wildlife through visiting wildlife and natural areas.
    - Increase appreciation of wildlife and the importance of the natural world – leads to conservation.
    - Funding for wildlife management.
- o. Explain the possible roles of urban forests to wildlife, for example
  1. Stop over for migrating birds
  2. Forest habitat for year-round birds
  3. Habitat for a variety of mammals, especially small mammals
  4. Maybe act as a connection between larger forested areas.  
\*4.1 – Ecology – 4.1.10.D, 4.1.12.D
- p. Chronic Wasting Disease (CWD) – what it is; how does it affect wildlife and people; and what measures are being taken to prevent spread.  
\*4.1 – Ecology – 4.1.10.D
- q. White Nose Syndrome – what it is; how it is affecting bats; and what measures are being taken to discover outbreaks and to prevent spread.  
\*4.1 – Ecology – 4.1.10.D

## Reference Materials List - 2015

The references are found on the PA Envirothon web site at [www.envirothonpa.org](http://www.envirothonpa.org) under *Station Training*. New references are underlined.

1. PA Species, Ecosystems & Biodiversity
2. Wildlife Note Series - see List A in the Appendix for Wildlife Notes needed for identification and List B for specific identification of selected wildlife profiles.
3. *Helping Wildlife: Working with Nature* booklet
4. Envirothon Animal Track Sheet – see List D in the Appendix for Identification of Wildlife sign indicated by a diamond ◇.
5. Envirothon Skull Reference Resource: compiled by the PA Game Commission – see List D in the Appendix for Identification of Wildlife sign indicated by an asterisk \*.
6. Deer Management – (To view online go to [www.pgc.state.pa.us](http://www.pgc.state.pa.us), click on White-Tailed Deer and scroll down to DEER MANAGEMENT, then go to resources b & c & d listed below.)
  - a. Aging Deer Jawbones – can also see deer aging movie on-line
  - b. Common Resource of the Commonwealth: Managing Deer for Everyone
  - c. A Place to Call Home: Deer- Habitat Relationships
  - d. Deer Aging Movie (viewing movie is optional, aging deer jawbones is not optional)
7. Endangered and Threatened Species Information. (For additional information visit the PGC website, [www.pgc.state.pa.us](http://www.pgc.state.pa.us), under the Wildlife tab, click on endangered/threatened species – extinct, endangered and threatened species profiles and background information.)
8. 2014-2015 Pennsylvania Digest of Hunting and Trapping and Wildlife Annual – To view online go to the PGC website, [www.pgc.state.pa.us](http://www.pgc.state.pa.us), scroll down and look on the right side for photo of *Hunter Trapper Digest* and *Wildlife Annual*. Specifically look at the following topics:
  - Wildlife Annual:
    - Coyotes Are Becoming More Visible.
    - Lyme Disease Awareness
    - Why We No Longer Have Bounties.
  - Hunting/Trapping Digest
    - Fluorescent Orange Requirements
    - Wildlife Classifications
    - State Game Lands Regulations
    - Wildlife Management Units (You do not need to know locations, just the reason for having units.)
    - Mentored Youth Hunting Program and Youth Hunting Opportunities
9. Pennsylvania Envirothon Bird Song CD
10. Wildlife Diseases (Visit the PGC website - click on Wildlife then Wildlife Diseases)
  - a. Chronic Wasting Disease (CWD)
    - Current Status - And Answers to the following Frequently Asked Questions:
      - What is CWD?
      - What animals get infected with CWD?
      - What is being done to manage CWD in Pennsylvania?
      - Why should I stop feeding deer?
      - What are the high-risk carcass parts?
      - Why are there restrictions on moving high-risk carcass parts?

b. White-nose Syndrome

- What is it? Where is it?
  - White-Nose Syndrome - What is killing our bats
  - WNS Occurrence Map
  - White-nose Syndrome in Pennsylvania
- Race to Save Pennsylvania's Bats – Video – This video is an optional resource; it is not a required reference.

## WILDLIFE STATION APPENDICES

### LIST A: Pennsylvania Game Commission Wildlife Notes

Envirothon students will be able to identify the animals described in the Wildlife Notes listed below

1. Bats
2. Beaver
3. Black Bear
4. Blackbirds, Orioles, Cowbird, and Starling
5. Blue Jay
6. Bobcat
7. Canada Goose
8. Chickadees, Nuthatches, Titmouse, and Brown Creeper
9. Chimney Swift, Purple Martin, and Swallows
10. Common Nighthawk and Whip-Poor-Will
11. Cottontail Rabbit
12. Crows and Ravens
13. Diving Ducks
14. Dove
15. Eagles and Osprey
16. Eastern Coyote
17. Elk
18. Finches and House Sparrow
19. Fisher
20. Flycatchers
21. Foxes (Red and Gray)
22. Gray Catbird, Northern Mockingbird, and Brown Thrasher
23. Kingfisher
24. Heron Family
25. Mallard Duck
26. Mice and Voles
27. Mink & Muskrats
28. Northern Cardinal, Grosbeaks, Indigo Bunting, and Dickcissel
29. Opossum
30. Owls
31. Pheasants
32. Porcupine
33. Puddle Ducks
34. Raccoon
35. Raptors
36. River Otter
37. Ruffed Grouse
38. Shrews
39. Sparrows and Towhees
40. Snow Goose
41. Squirrels
42. Striped Skunk
43. Tanager
44. Tundra Swan
45. Vultures
46. Weasels
47. White-tailed Deer
48. Wild Turkey
49. Woodchucks
50. Woodcock
51. Wood Duck
52. Wood Warbler
53. Woodpeckers
54. Wren

**LIST B: Identification of WILDLIFE PROFILES**

**\*\* Wildlife Profile Set #5 will be used for the 2015 Envirothon.** Envirothon students will be able to identify, describe the natural history, determine the wildlife biology, and evaluate habitat for the animals described in the selected Wildlife Profile by reviewing the Wildlife Notes which correlate to the animals designated in each profile. (Wildlife Profiles will be selected annually.)

**\*\*Wildlife Profile Set 5**

Bats	Cottontail Rabbit
Crows and Ravens	Foxes
Northern Cardinal, Grosbeaks, Indigo Bunting, and Dickcissel	Raccoon
Squirrels	White-tailed Deer
Finches and House Sparrow	Wrens
Thrushes	Opossum
Hawks	Blue Jay

**List C: Identification of BIRD CALLS, Songs, and Sounds** (Based on the Pennsylvania Envirothon Bird Song CD)

- |                           |                         |                          |
|---------------------------|-------------------------|--------------------------|
| 1. Bald Eagle             | 12. Great Blue Heron    | 23. Red-Tailed Hawk      |
| 2. Barn Owl               | 13. Great Horned Owl    | 24. Red-winged Blackbird |
| 3. Barred Owl             | 14. House Sparrow       | 25. Ruffed Grouse        |
| 4. Black-Capped Chickadee | 15. House Wren          | 26. Robin                |
| 5. Blue Jay               | 16. Kestrel             | 27. Screech Owl          |
| 6. Canada Goose           | 17. Mallard             | 28. Wild Turkey          |
| 7. Cardinal               | 18. Meadowlark          | 29. Wood Duck            |
| 8. Common Nighthawk       | 19. Northern Flicker    | 30. Wood Thrush          |
| 9. Crow                   | 20. Osprey              | 31. Woodcock             |
| 10. Dove                  | 21. Pheasant            |                          |
| 11. Eastern Towhee        | 22. Pileated Woodpecker |                          |

**List D: Identification of WILDLIFE SIGN**

SIGNS CAN INCLUDE: a picture, fur, hair, feather, gnawing, rubbing, pellet, nest, scat, skull, and track. (You will only identify skulls of an animal marked with a \* and tracks of animal marked with a ◇.)

- |                                  |                          |                           |
|----------------------------------|--------------------------|---------------------------|
| 1. Beaver * ◇                    | 11. Elk ◇                | 22. Raccoon * ◇           |
| 2. Black Bear * ◇                | 12. House Sparrow        | 23. Raptors               |
| 3. Black-Capped Chickadee        | 13. Fisher               | 24. River Otter * ◇       |
| 4. Bobcat * ◇                    | 14. Foxes (Red & Gray) ◇ | 25. Ruffed Grouse         |
| 5. Blue winged Teal              | 15. Mallard Duck         | 26. Squirrels             |
| 6. Black Duck (see Puddle Ducks) | 16. Mink ◇ & Muskrats ◇  | 27. Striped Skunk ◇       |
| 7. Canada Goose                  | 17. Opossum ◇            | 28. White-tailed Deer * ◇ |
| 8. Cottontail Rabbit *           | 18. Owls                 | 29. Wild Turkey           |
| 9. Crows                         | 19. Pileated Woodpecker  | 30. Woodcock              |
| 10. Eastern Coyote ◇             | 20. Pheasants            | 31. Wood Duck             |
|                                  | 21. Porcupine ◇          | 32. Woodpecker            |
